Warwick Salt is proud to present **Arctika**, a de-icer especially mixed to answer your needs. Compared to all other mixes, **Arctika** is the one to use when it is time to melt ice and snow. **Arctika** is a unique mix, containing exothermal¹ elements, which accelerates the melting action.

EFFICIENT

Arctika melts ice at temperatures up to -20 °C.

ACTIVE

Arctika contains exothermal¹ elements which produces heat when in contact with ice and snow.

CLEAN

Arctika Does not stain carpets or floors.

NO-DETRIMENTAL

Arctika will not damage treated paving stone and mature concrete of good quality.

HIGH PERFORMANCE

Arctika has been designed to melt large quantities of compacted snow and ice.

NO-TOXIC

Arctika used with moderation, will not affect the environment.

ECONOMIC

Arctika works faster than salt², urea², potassium² or mixtures of these products, save time and money.

SAFE

Arctika reduces accidents by securing your pedestrian areas more rapidly.

RAPID

Arctika grips on ice and turns it into liquid rapidly (exothermal¹ action), this way you bring down the possibilities of carrying de-icer inside the building.

De-icer

**Respectful
of the environment**

WARWICK SALT

¹ An exothermal de-icer releases heat.
² An endothermal de-icer absorbs heat.
