

POOL SALT

The Key advantages:

- Pool Salt is a Food Grade Salt that is 99,9 % pure. Especially made for pools equipped with a Chlorine generator.
- Contains no additives, such as anti-caking (YPS or iodine).
- Eliminates handling of dangerous chemical Chlorine.
- Quick dissolving crystals for easier mixing.
- Ease of maintenance: Saltwater remains more stable and better balanced.
- Softens the skin.
- Reduces upper respiratory tract and eye irritations (nasal congestion, throat irritation).
- No more bothersome worries.

Dissolves quickly

WARWICK SALT

**FOOD GRADE SALT
99,9 % PURE**

This product is recommended for direct application to swimming pool water using a salt chlorinator. Always follow the salt chlorinator manufacturer's instructions. Each Kilogram of salt will increase the salt content by 100 parts per million for every 10,000 Litres of water.

Chlorination Procedure:

A small amount of electrical current frees the pure Chlorine in the salt as a gas; when the filtered Saltwater passes through the salt chlorinator, this gaseous Chlorine is immediately dissolved, thereby disinfecting the water and returns to its natural salt state without creating irritating by-products (such as chloramines). The addition of salt is only carried out in order to compensate for the quantity lost during filter backwashing.

For New Swimming Pools:

Follow manufacturer's instructions.

For Established Swimming Pools:

Determine the current salt level in the swimming pool and add the required salt in accordance with manufacturer's instructions. Previous use of other chemical products may create a Chlorine residue.

Periodic water analysis is recommended. Other chemical products for use in swimming pools will be required in order to maintain proper water balance.

POOL (litres)	SALT		
	480 ppm	3200 ppm	4000 ppm
10,000	5 kg	30 kg	40 kg
50,000	25 kg	160 kg	200 kg
75,000	35 kg	240 kg	300 kg
100,000	50 kg	320 kg	400 kg
125,000	60 kg	400 kg	500 kg
