**Looking for an alternative for
your abrasive needs?
Warwick Salt has the solution!**

Warmix

Available in 1000 Kg bags.

WARWICK SALT

ROAD MAINTENANCE (WINTER)

Abrasive Mix

Application: when uniformly mixed with an abrasive at a rate of 3 to 5%, **Warmix** dissolves into the mound, providing a humid mixture, which does not compress or adhere to icy surfaces during spreading.

Snow and Ice Thawing

Application: in order to prevent ice forming on sidewalks, stairways, garage alleyways, etc., spread 60 gr/m³ of **Warmix**. For general thawing purposes, after having dispensed **Warmix** as required, remove the ice as soon as it can be broken up as well as the excess thawing agent.

MINING

Prevents mineral mounds from freezing.

Application: a uniform mix of 0.5 to 3.5%. The quantity will vary according to the temperature and mound humidity rate.

ENVIRONMENT

When applied according to instructions, **Warmix** does not harm the environment.

AVAILABILITY

Warmix is available in 1000 Kg bags.

***WARWICK SALT** aims to do all that is possible to exceed their clientele's expectations. To achieve this, **WARWICK SALT** is committed to developing strong partnerships with its customers by offering them a varied range of products, which meet their expectations, delivering the requested products within the specified lead times, and providing them with technical support.*
